- A new alternative to plastic form scale building models!
- Photo Real Scale Building kits may be the most realistic kits available!
- Great for use on model dioramas, slot car, and train track layouts!
- Designed using photos of real building elements for the most realistic appearance

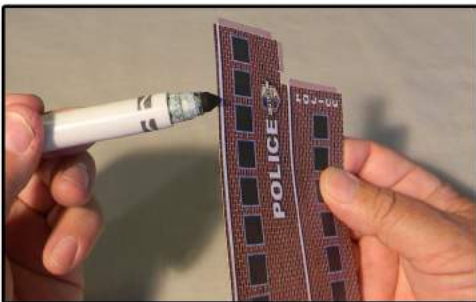

## STEP 1 - Collect the correct tools.

For best results, we suggest you gather at least the most basic tools you will need to complete assembly. While you may find more tools that will help you achieve outstanding results, we suggest you start with the following: Hot glue gun, scissors, variety of water based colored markers, tweezers, straight edge rulers, hobby knife, instant setting high strength hobby glue.

STEP 2 - Empty contents of the kit, and carefully cut out all the individual parts to be assembled. Please note that the most precise cuts you can make will result in a dramatically better looking finished project.

STEP 3 - With appropriate color markers, detail the edges of all the parts you cut out. This will result in a finely finished project once assembled.

STEP 4 - Scoring. Using a sharp hobby knife (or scoring tool) and a straight-edge ruler, make a light shallow cut into the surface of the part you wish to bend. Do not cut all the way through. This is called scoring. Scoring along lines to be bent makes bending all printed parts easier. Bend parts using the length of your straight-edge ruler. Scoring is an essential skill.

STEP 5 - Score along all edges of each building part that will be needed to be folded over. Scoring will result in clean, straight lines. Start with the roof of the Police Station building.

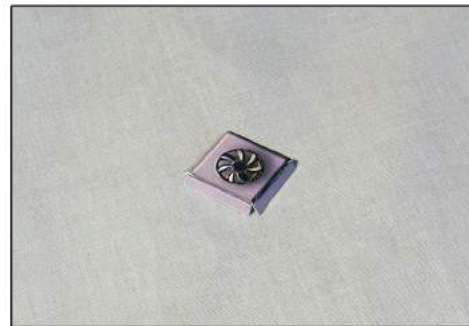

STEP 6 - Fold each side of the building roof using a straight edge, for a nice clean fold. We suggest bending a small section at a time at first, then bending the entire length of the fold more than 90 degrees, then release.

Step 7 - Fold each tab at the corners of the building's roof, then apply a small amount of white hobby glue, and join together. Hold until the glue dries, and then release. Do this on each corner of the building roof. .

STEP 8 - Next, apply a little pressure on each folded edge to straighten it, and apply a couple drops of hot glue to the fold to reinforce the edge. Hold until each drop cools, and release.

STEP 9 - Fold all corners of roof top HVAC units, using a small straight edge. Perform this on all edges of each piece. The result should look like this.

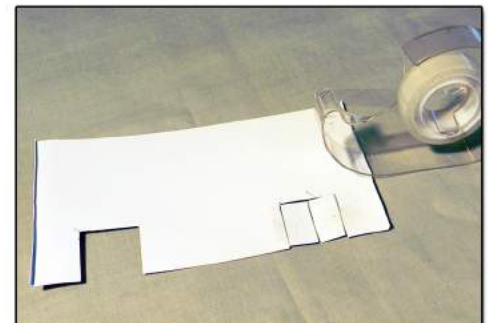

STEP 10 - Place a drop of hot glue in the corner of each HVAC unit while it is being held together. Hold until the glue cools off, then release. Perform this action on all edges of each piece.

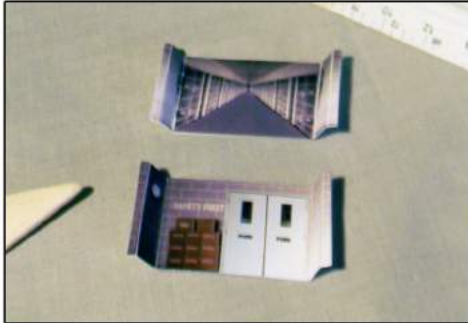

Step 11 - Apply a good size drop of hot glue to the back of each HVAC roof unit, then position in place on roof.

Step 12 - Cut out every door separately on the rear panel of the building like this.

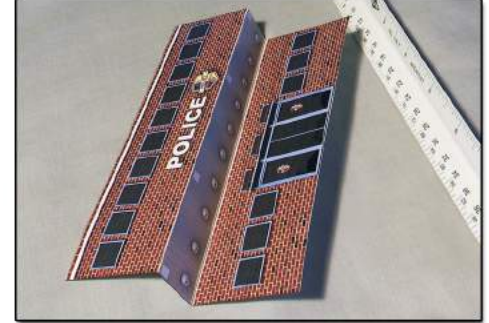

Step 13 - Using clear tape to create door hinges, apply doors to building panel

STEP 14 - Score and fold all lines that need to be bent for each Illusion Room, and fold as shown in this picture.

STEP 15 - Using white hobby glue, attach each Illusion Room to the back-side of the Police Station building wall panel as shown. Pay attention to pictures of delivery dock and detention area so appropriate panel is used.

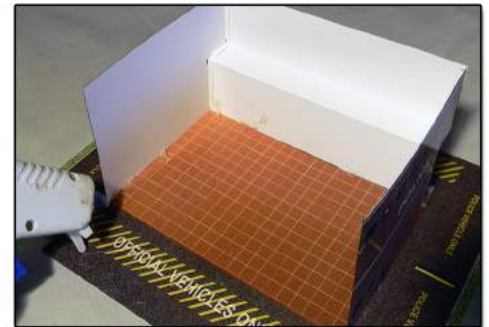

Step 16 - Score and fold front panel of the Police Station building as shown here.

STEP 17 - Using a small straight edge, fold each wall connection tabs as shown here in this picture. These tabs help you join building walls easily.

STEP 18 - Apply a small amount of hobby glue to the wall joining tabs, then join the walls as shown. Hold in place until the glue dries, then release.

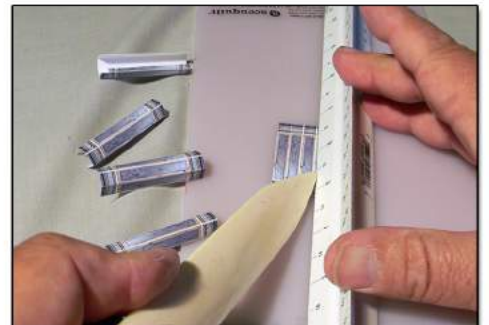

STEP 19 - Position the building walls in place (where they should go), and tack them in place with a drop of hot glue. Hold in place until the glue cools. Repeat around all walls until complete.

Step 20 - Join front wall to the other three walls. Result should look like this.

Step 21 - Place roof on top of building with newly joined walls

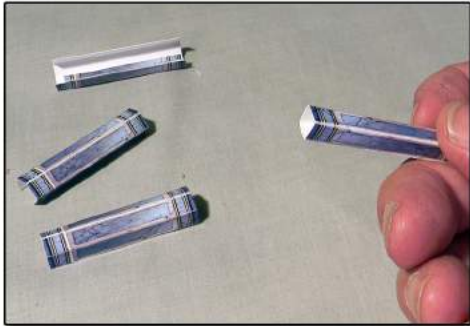

Step 22 - Score and fold support columns to be used at the front of the building

STEP 23 - Apply white hobby glue to the aforementioned tab, and squeeze the columns together - hold until the glue dries, then release.

STEP 24 - With a hot glue gun, place a drop of hot glue on the bottom of each column, and place it in the correct position on the building base - and hold until the glue cools, then release.

Step 25 - When cool, ease the top of each column outward, add a drop of hot glue in the top of each column and put back in the correct position on the building. Hold in place until glue cools.
